Please measure your drainage at the same time of day, three times a day and total the output for a 24-hour period

Use the specimen cup provided by the hospital to measure amount in cc's or mLs .

Strip the drain to help move along any clots and keep the drain functioning.

It is normal to have some fluid leak around the drain site.

Squeeze the drain from the sides to flatten drain, for best results empty drain if more than 1/3 full.
